Dry in Dry Powder Coating Equipment

Application:

Surface coating of mineral fillers like calcite or chalk

Performance:

Capacity 1 t/h up to 10 t/h
Coating grade possible from 0,5 % to 2 %
Drive power 30 kW to 250 kW

Features:

Agglomeration free surface coating

Suitable for use of various coating agents in powder or liquid form like stearic acid, stearates or wax

High efficiency by generation of high turbulence

Operation with hot air up to 100 °C

Vertical rotor with several stages

Melting systems for liquifying solid coating agents can be supplied on request

Mixing screw for pre-mixing the filler product
